Education

Brandeis University

Bachelor's in Computer Science

Aug 2021 – May 2025

Waltham, MA

Certifications

AWS Certified Cloud Practitioner — Amazon Web Services (2026)

Summary

- Data Engineer with experience building and deploying production-style data pipelines and backend services using Python, SQL, and REST APIs. Skilled in designing incremental ETL workflows, modeling relational data, and delivering analytics systems on cloud infrastructure.

Experience

eClinicalWorks

Aug 2025 – Current

Application Systems Analyst (Production Systems)

Westborough, MA

- Own investigation of 6–8 daily production data issues across MySQL and Microsoft SQL Server, using SQL-driven analysis, data validation, and cross-environment comparison to identify root causes across application and database layers.
- Close an average of 2 client-impacting cases per day by correcting invalid or outdated records, resolving data discrepancies, and restoring production data accuracy for downstream workflows.
- Accelerate defect triage by delivering high-signal engineering handoffs with reproduction steps, logs, sanitized screenshots, and database findings that reduce rework and speed up issue resolution.
- Proactively detect untracked defect patterns and systemic data issues, escalating them into Jira-tracked engineering work and improving visibility into recurring production failures.

FanFeast LLC (Formerly BarBets LLC) thefanfeastofficial.com

May 2024 – Current

Software Engineer (Founding Team)

Waltham, MA

- Built the core ingestion pipeline for sports events, user activity, bets, reward redemptions, QR scans, and restaurant activity, creating the data foundation for a near real-time rewards platform used in live pilot environments.
- Engineered backend logic and internal data workflows from scratch, integrating SportsRadar data with application systems to power betting, credit, and reward operations across 2 pilot restaurant locations.
- Designed and deployed AWS-hosted backend infrastructure with MySQL-backed data workflows, enabling near real-time processing for the platform's core betting and rewards engine.
- Structured operational data for restaurant and admin analytics around rewards, user credits, and engagement activity, supporting a live product used by 50+ unique users and recognized with 2nd place at the 2024 Brandeis SPARK Competition.

RightRev

May 2024 – August 2024

Data Engineer

Santa Clara, CA

- Built and optimized data processing pipelines using Python and Google Document AI to extract structured data from unstructured inputs, enabling automated downstream workflows
- Developed Python-based data processing services leveraging LLM APIs to classify and transform large datasets, reducing manual effort and improving processing accuracy
- Contributed to core product enhancements by improving document parsing performance and implementing API-driven automation features.

eClinicalWorks

May 2023 – August 2023

Software Development Intern

Westborough, MA

- Used Angular performance profiling tools to identify inefficient data bindings and reduce UI memory consumption in QA environments
- Automated the generation of memory leak reports using **JavaScript**, reducing manual reporting time and increasing accuracy.
- Assisted in front-end QA and product testing using **Angular** debugging techniques to trace memory leak patterns and component lifecycle issues, enabling targeted performance optimizations.

Projects

NBA Analytics Data Pipeline | GitHub | *FastAPI, PostgreSQL, AWS*

April 2026

- Built and deployed an NBA analytics platform on AWS Lightsail using FastAPI, PostgreSQL, Docker, and GitHub Actions, with a live dashboard, API docs, and prediction UI.
- Implemented incremental, idempotent ingestion workflows using composite keys, ensuring data consistency across multiple seasons
- Automated daily ingestion jobs via GitHub Actions with pipeline run tracking and observability using a dedicated `pipeline_runs` table. Processed 2,000+ NBA games across multiple seasons
- Developed RESTful APIs and analytics endpoints supporting team rankings, trends, and data quality validation
- Built and deployed a Dockerized backend service on AWS Lightsail with PostgreSQL
- Engineered feature pipelines and trained a scikit-learn logistic regression model achieving 69.8% accuracy and 0.75 ROC-AUC for matchup prediction

Technical Skills

Languages: Python, SQL, Java, JavaScript, Go, Swift

Data and Backend: ETL pipelines, incremental pipelines, data modeling, data ingestion, API integration, query optimization

Cloud and Tools: AWS EC2, PostgreSQL, MongoDB, Linux, Postman, pgAdmin
